Genetic engineering, also called genetic modification or genetic manipulation, is the direct manipulation of an organism's genes using biotechnology. It is a set of technologies used to change the genetic makeup of cells, including the transfer of genes within and across species boundaries to produce improved or novel organisms.

Genetic Engineering: Career Scope, Courses & Job Scopario.

Genetic Engineering is also referred as genetic modification. It is a process of manually adding new DNA to a living organism through artificial methods, ft is a process of manually adding new DNA to a living organism through artificial methods.
